Data Analytics is the process of examining raw data to uncover patterns, draw meaningful insights and support better decision making. It helps individuals and businesses understand past performance, monitor current trends and predict future outcomes.. Features of Data Analytics are

- **Insight Generation:** Helps identify trends, patterns and anomalies in data to make informed decisions.
- **Predictive Capabilities:** Uses historical and current data to forecast future outcomes and opportunities.
- **Data Management:** Involves building systems and tools to efficiently handle, process and analyze large volumes of data.
